

## C&D World 2022 Is the Answer to Your C&D Recycling Questions

How are top recycling operations in different regions recovering C&D? How is the incoming material and waste being transported? How about an update on the latest end markets? And just what are the best ways to retain employees and keep insurance costs down? Dealing with Environmental Justice issues? And why is there so much M&A activity going on, and will it continue? These are just some of the questions that can be answered at [C&D World 2022](#), taking place March 13-15 at the Loews Atlanta Hotel.

[Registration is open](#) for the CDRA's Annual Meeting, and [room block reservations](#) are being accepted. The leaders of the C&D recycling industry will be in attendance, from companies such as LRS, DTG, Dem-Con, Zanker Recycling, Big City Crushed Concrete, Cooper Recycling, and Michael Brothers, among many others. In addition, Luck Stone will provide a tour of their mixed C&D recycling/concrete recycling/aggregate quarry operation. Space is limited, so register early (limit two tour tickets per company). And, of course, the latest innovations in the equipment world will be discussed in the Technology Fair and be on display in our exhibit hall.

## What Is Going on in Your State?

Advocating for C&D recyclers has been part of the CDRA since its inception. While we keep track of what is going on nationally on the legislative and regulatory front, we need everyone to pitch in to make this work. The CDRA Legislative Committee is asking all members to report on any ongoing or future C&D-related legislation and regulation in their states. Perhaps the CDRA can help mold that legislation for the betterment of the industry. All this and more will be discussed during the Legislative Committee's regular monthly meetings, which take place the first Thursday of each month at 12 p.m. EST. All members are invited. For more information, contact CDRA Executive Director William Turley at [turley@cdrecycling.org](mailto:turley@cdrecycling.org).

## CDRA Expands Member Services with New Gypsum Recycling Committee

A new [Gypsum Recycling Committee](#) has been formed by the CDRA to help those involved in the industry grow the recovery rate for the commonly found material.

Post-consumer gypsum, largely derived from waste drywall, has been difficult to recover from the construction and demolition material stream. Over the years some companies have perfected methods to process the material into useful end products ranging from soil amendment to closing the loop into new wallboard. To support the increased interest in getting more gypsum recovered, the CDRA is teaming up with key stakeholders in gypsum recycling to move the industry forward.

The committee's mission is to provide guidelines and other assistance in developing and expanding recovery and end markets for recovered gypsum. Terry Weaver, USA Gypsum, will be the first chair of the committee. The committee will be comprised of companies involved in every step of recovering drywall, including the manufacturers (and the Gypsum Association), contractors, processors, and end-users to provide support for the drywall recycling industry.

Any CDRA member can participate in this committee. To join, contact the CDRA at [info@cdrecycling.org](mailto:info@cdrecycling.org).

## Key Dates

- January 24: Shingle Recycling Committee Meeting
- February 3: Legislative Committee Meeting
- February 3: Membership and Marketing Committee Meeting
- February 7: Convention Committee Meeting
- February 21: End Markets Committee Meeting

Questions? Please email [info@cdrecycling.org](mailto:info@cdrecycling.org).

## Join NDA at Demolition San Diego

The National Demolition Association (NDA) is hosting [Demolition San Diego](#), February 26 – March 1, 2022. This Annual Convention and Expo will convene professionals for education, networking, and more. As the industry gets back to work in earnest, don't miss your chance to reengage.

## Industry News

Massachusetts jumps on the Environmental Justice bandwagon as they announce their plans to implement regulations on the topic:

[MEPA Office Issues Environmental Justice Regulations and Guidance](#)

WTE plant in Gary, IN, is moving forward despite local opposition using EJ as part of the reason. This is a very industrial area that is already pretty polluted.

The plant will include timber and soft plastics in its fuel mix:

## Welcome New Members!

Please join us in welcoming the CDRA's newest members!

The Asphalt Roofing Manufacturers Association (ARMA) is a trade association representing North America's asphalt roofing manufacturing companies and their raw material suppliers. ARMA includes manufacturers of asphalt shingles and asphalt low slope roof membrane systems.

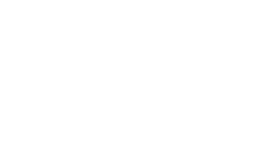

Atascosa Recycling has over 25 years of combined experience in recycling, and uses a proprietary processing method to produce clean and consistent (3/8 minus) RAS.

Gypsum to Gypsum is a company that is deeply committed to staying ahead of the curve when it comes to best practices around the collection, processing, and distribution of recycled gypsum drywall. Gypsum to Gypsum's mission is to keep all drywall diverted from landfills. Through innovation and determination, they continue to move the ball forward in their global mission to protect and improve the environment that we live in.

Huntington is a regional bank that delivers customized banking, financing, and investing solutions that integrate with your day-to-day business practices. Huntington can help you and your team: capitalize on new opportunities to grow your business; mitigate risk and plan ahead; weather volatility and ensure longevity; and improve efficiencies throughout your operation.

Mount Materials is a full-service recycling operation taking in concrete, asphalt, fill material, and any class B materials produced by its customer base. Mount Materials sits on 30 Acres in the Keystone Industrial Port Complex in Fairless Hills, PA.

Northstar Clean Technologies Inc. is a Vancouver-based clean technology company focused on the recovery and repurposing of single-use asphalt shingles. Northstar has developed a proprietary design process for taking discarded asphalt shingles and extracting the liquid asphalt, aggregate sands and fiber for usage in new hot mix asphalt, construction products and other industrial applications.

Sky Quarry focuses on the recovery and repurposing of waste asphalt shingles. Sky Quarry's proprietary design process diverts waste asphalt shingles from over-crowded landfills and extracts the liquid bitumen, shingle aggregate, and composition elements for use in the development of new asphalt shingles, asphalt paving materials, refined bitumen products and other industrial applications.

Waste Robotics develops state-of-the-art software solutions to recognize waste materials and facilitate robotic extraction. This allows for smaller, more precise, safer, and more profitable facilities for organics, single-stream, and construction and demolition recycling.
