CDRA President's Message

Mid-Year Board Meeting and Strategic Planning Report

by Terry Weaver, President
USA Gypsum
Denver, PA

Thank a board and committee member! Board and committee member time and talent contributions cannot be quantified in dollars but are indispensable to the CDRA. The Board welcomes and strongly encourages participation in committees and board meetings by all members. In fact, one of the best ways to become involved in the CDRA board is by first volunteering on one of the many committees.

The CDRA has some great strengths. We have transitioned to membership growth and are on solid financial footing. Most of the administrative challenges due to the association management company (AMC) change are behind us and I believe we are prepared to move forward. Our new AMC has been helping us with strategic planning in order make improvements in the right areas.

Strategic Planning is an important function of the board. Recently the board met in Key West for the mid-year board meeting and several important objectives were identified.

- **Annual CDRA member donations are (\$500,000+/-) plus the value of time and talent of volunteer members.** We discussed that more of these resources need to be spent on core functions which benefit our members, such as C&D material end markets and removing barriers to markets vs. the administration of the association.
- **How to grow end material markets** CDRA members have clearly communicated that end markets are the most important challenge facing the C&D recycling industry. The board voted to set up a committee for end market development and to make a commitment to the University of Florida for ongoing research in support of this effort. We're excited about this new focus of CDRA's energies and hope members will actively participate in the committee.
- **10% annual membership and sponsorship growth.** After achieving 10% membership growth since our "transitioning to growth" focus in Brooklyn, the board agreed to establish a 3-year growth goal for both membership and sponsorships in order to support our plans for funding end market research projects with UF. Please consider your companies contributions to CDRA for 2020 in light of these goals, as they will truly help drive the industry forward. **C&D**

Besides serving as President of the CDRA, Terry Weaver is President of USA Gypsum, Denver, PA.

Membership/Marketing Committee

Membership up in 2019; Goal is for more in 2020

By Terri Ward and Brandon Lapsys, CDRA Membership/Marketing Committee co-Chairs
Construction and Demolition Recycling Association (CDRA)

During the CDRA Board of Directors Midyear Board Meeting in Key West the Membership/Marketing Committee met to discuss the status of the association's efforts:

- Membership in 2019 was up 11% over 2018, and we're pleased to report there was a 90% retention rate of members of the previous year. The Board has set as part of the CDRA's strategic plan another increase of 10% for 2020, along with a goal to increase sponsor members. This growth is intended to help fund the activities members value most, such as R&D efforts by the University of Florida focused on end market development, and advocacy efforts to answer the industry's regulatory and legislative issues.
- We are improving the Find A Recycler function on CDRA's main website, www.cdrecycling.org. The function is one of the most used components on the website, and is used by potential customers in the C&D industry. The new update will allow members to list materials accepted at their facilities, as well as include an overview of what their company does.

- We have made improvements to the website to make members-only content more visible and accessible, including the CDRA's numerous white papers, protocols, and past webinars.
- A continued focus on promoting a positive image and raise the visibility of the C&D recycling industry.

The committee is seeking input on what webinars the membership would find useful for the CDRA to organize and hold. Also, we are seeking more committee members who want to help the CDRA grow in its mission to serve the C&D recycling industry. For more information on either of those topics, please contact info@cdrecycling.org. 

Besides serving as co-Chairs of the CDRA Membership/Marketing Committee, Terri Ward is on the CDRA Board and is Vice President, Business Development, Sparta Manufacturing; Brandon Lapsys is Vice President/General Manager of Komptech Americas.

CDRA Convention Committee ConExpo-Con/Agg and C&D World 2020

*By Paul Kuhar, CDRA Convention Committee Chair and Vice President
Construction and Demolition Recycling Association (CDRA)*

Sponsorships for C&D World 2020 are still available. Don't miss this opportunity to raise your company's visibility to the attendees at the CDRA Annual Meeting, who will also be going over to ConExpo-Con/Agg.

For more information on sponsorships, go to <https://cdrecycling.org/news/c-d-world-2020/who-attends/> or e-mail info@cdrecycling.org.

It is difficult to believe 2019 is coming to a close and soon we will welcome a new year with a new chapter to create positive change in our industry. Our committee has been hard at work putting together our 2020 C&D World event and Annual Meeting that will co locate on March 11 during the huge ConExpo-Con/Agg show March 10-14, 2020 in Las Vegas.

This event will provide insight on key topics that were voiced directly from our members at our show in Brooklyn earlier this year during our roundtable discussions. We will focus on end market development and an economic forecast presented by Ed Sullivan that will give us insight on what we can expect from this ever-changing economy as it relates to the construction recycling industry.

End markets can be challenging, especially when you're dealing with wood and C&D fines in the material stream. C&D World 2020 will host a power panel of industry leaders who will discuss how they have improved C&D fines with equipment retrofits to existing plants and new technology that will create new markets for wood products.

As always, attendees to C&D World will get badges to enter the equipment exhibition at the Las Vegas Convention Center, which is truly a sight to be seen. Attendees to C&D World will be treated to an excellent half-day program, the exciting fundraiser which will be at Alexxa's Bar on The Strip. As always, C&D World registrants will enjoy reduced room rates from what one can get from the ConExpo-Con/Agg.

If you are not able to make C&D World but still want to go to ConExpo-Con/Agg, reduced rate exhibit hall badges can be purchased through the CDRA. **C&D**

For example, CDRA members will have this pricing for:

- \$95 until January 17, 2020
- \$149 until March 9, 2020
- \$179 during CONEXPO-CON/AGG show days

Additionally, CDRA members will be eligible to register for educational sessions at a discounted rate as follows:

- \$495 for an all-session pass with USB recording
- \$345 for an all-session pass
- \$175 for a single-day pass
- \$59 per single session

Besides serving as Chair of the CDRA Convention Committee and CDRA Vice President, Paul Kuhar is Vice President at Champion Waste & Recycling in Dallas, TX.

Legislative and Regulatory Committee Update

by Brock Hill, Legislative Committee chair
Construction and Demolition Recycling Association (CDRA)

During our Legislative Committee meeting at the Midyear Board Meeting, we continued the conversation with Dr. Timothy Townsend from the University of Florida on our work to develop a C&D Recycling Roadmap that will help local jurisdictions in their efforts to develop meaningful and successful C&D recycling programs. This document provides background on where this material is generated, what the material is comprised of, and the many different ways this material is sorted and processed across the nation. It further details the benefits, both environmental and economic, and lists case studies on successful implementations of beneficial regulation. The committee discussed adding a section on 3rd party verification of recycling rates to further level the playing field with trustworthy data. It was decided that an emphasis on data verification will be a component in the final published document.

Work continues on the University of Florida's Lifecycle Analysis research on C&D materials. It was identified at the board meeting that we will focus efforts on the following materials as these comprise the majority of member tonnage:

- Concrete
- Wood
- Drywall
- C&D Fines

A new committee was formed to explore end market developments for processed and sorted material. End markets have consistently been expressed by membership as an area of concern that needs dedicated effort. Biochar and other new end products are showing promising results, and the CDRA is aiming to support these goals. The board has been tasked with drafting the bylaws and responsibility of this new committee.

The Solid Waste Environmental Excellence Protocol has released its newest Standard this month. Southern California member Richard Ludt from Construction and Demolition Recycling Inc., quickly rallied the CDRA legislative committee, and select members, to read the draft and discuss many positive additions to the standard to address C&D Recycling as a component of this certification for Cities. Most, if not all, positive additions were implemented into the protocol. Los Angeles has chosen to be the pilot for this new standard, and we are

looking forward to seeing the results. More information can be found at <https://nrra.net/sweep/>

The CDRA continues to support the Recover Act, which a coalition of associations is working on to see get passed in Congress. The legislation would provide financial help for the installation of equipment that helps clean up the end products created by recycling centers.

OSHA put out a request for suggested revisions to Table 1, the most important component of the Employee Silica Exposure rule. Table 1 puts forth the basic steps each construction industry sector must follow in order to comply with the rule. The agency wanted to know if there were alternative technologies that would allow businesses to comply, or if an industry was having trouble meeting the requirements. Concrete crushers, the C&D group most affected by the rule have little problem complying because the CDRA effectively lobbied OSHA to make common sense changes to the original rule, and after conferring with several concrete recycling members, we need not make any recommendations. **C&D**

Besides serving as Chair of the CDRA Legislative Committee, Brock Hill is Vice President of Premier Recycle Company in San Jose, CA

How Many Versions of LEED? C&D Interpreted

by Stephen M Bantillo
Executive Director, Recycling Certification Institute

The Recycling Certification Institute (RCI) remains engaged on numerous issues directly and indirectly related to third-party certification. One of the key issues for 2019 has been the United States Green Building Council's (USGBC) updates to LEED. A prior version of LEED (v4) required separation of C&D material streams for credit in the Materials and Resources section. USGBC updated v4 with a new release in January 2019 in the form of v4.1 beta. While still requiring separation of C&D materials, v4.1 beta sought to make it easier for builders who took their mixed C&D materials to facilities Certified by RCI. Unfortunately, the initial version of v4.1 beta added confusion and did not meaningfully address the issues associated with onsite separation of material streams.

RCI continued its communication with USGBC regarding our concerns and in July 2019 the USGBC released an updated version of LEED v4.1 beta. This latest release is the closest we've seen to our original recommendations to USGBC. While it provides incentive for builders to take mixed C&D loads to RCI-Certified facilities and addresses some of the issues with onsite material separation, it still does not go quite far enough. We will continue our work with

USGBC to bring benefits to projects taking C&D materials to RCI-Certified facilities, which in turn benefits those facilities that are or become RCI-Certified.

We recognize there is still confusion in the "C&D-sphere" with multiple versions of LEED still in play (v2009, v4, and v4.1 beta, for example). To assist C&D facilities, builders, contractors, project managers/consultants, and haulers, etc., we have created a sheet that simplifies the various versions of LEED and provides some basic Q&A as examples. That information is included within the next two pages and you may also download the sheet at our webpage [www.recyclingcertification.org/resources/ C&D](http://www.recyclingcertification.org/resources/C&D)

Stephen M Bantillo is Executive Director of the Recycling Certification Institute, and can be reached at info@recyclingcertification.org.

What Is Your C&D Facility's Recycling Rate?

The Recycling Certification Institute has launched its online version of the Certification of Recycling Rates (CORR) program. This program provides credible, ISO-level third-party certification of C&D facilities' true recycling rates.

Can You Prove It?

CORR is the only program that provides a credible, third-party look at the true recycling rates. It is the only program recognized by USGBC for the new extra point under LEED for using a certified recycling facility.

Why Become Certified with RCI?

- Government agencies want accurate reporting of C&D recycling rates from facilities
- Many green building programs require recycling of C&D materials
- LEED Specifies use of CORR to gain an extra point for your clients
- Verify your facility's performance and have your recycling rate published with RCI
- Give your facility a marketing edge over the non-certified facilities

CORR is administered by the Recycling Certification Institute. For more information, including scheduling a recycling rate certification or to register your facility with the Institute, go to www.recyclingcertification.org

LEED 2009 (v3), v4, v4.1 beta – C&D INTERPRETED

LEED 2009 (v3)

USGBC is no longer Registering project applications under LEED 2009 (v3); thus, the requirements apply only to those projects that previously Registered under LEED 2009 (v3) and were approved by USGBC.

Project Requirement:

- Path 1 (1 pt) 50% Diversion minimum, use any facility, third-party verified or not
- Path 2 (2 pts) 75% Diversion minimum, use any facility, third-party verified or not
- MRpc87 (1 pt) A single additional Pilot Credit point may be issued for use of third-party verified facility regardless of facility recovery rates

LEED v4

Superseded by v4.1beta, but USGBC is still Registering v4 project applications, so project requirement applies to existing and newly Registered v4 applications.

Project Requirement:

Option 1

- Path 1 (1 pt) 50% Diversion minimum, diverted materials must include at least three separated material streams. Use any facility, third-party verified or not.

OR

- Path 2 (2 pts) 75% Diversion minimum, diverted materials must include at least four separate material streams. Use any facility, third-party verified or not.

OR

- Option 2 (2 pts) Reduction of Total Waste Materials
Do not generate more than 2.5 lbs of construction waste per square foot of building's floor area.

- MRpc87 (1 pt) A single additional Pilot Credit point may be issued for use of third-party verified facility regardless of facility recovery rates.

LEED v4.1 beta: July 25, 2019 Update <https://www.usgbc.org/leedaddenda/100002271>

These changes reflect updates to the original v4.1beta released January 2019.

Project Requirement:

- Path 1 (1 pt) 50% Diversion minimum, diverted materials must include at least two separate material streams. Use any facility, third-party verified or not.

OR

- Path 2 (1 pt) 50% Diversion minimum, diverted materials must include Mixed C&D as a material stream and must be sent to an RCI-Certified Facility.

OR

- Path 3 (2 pts) 75% Diversion minimum, diverted materials must include at least three separate material streams. Use any facility, third-party verified or not.

OR

- Path 4 (2 pts) 75% Diversion minimum, diverted materials must include at least two separate material streams. All Mixed C&D is required to be one of the streams and must be sent to an RCI-Certified Facility.

- MRpc87 The Pilot Credit does not apply for v4.1 beta projects.

LEED 2009 (v3), v4, v4.1 beta – C&D INTERPRETED

Questions and Answers

Q. *What counts as recoverable material streams in LEED v4 and v4.1 beta?*

- A. Let us first clearly state that Mixed C&D counts as a material stream, as does drywall, metal, wood, carpet, for example. It is easier to answer the question in terms of what does not count as a recoverable material stream:
- Trash, Alternate Daily Cover (ADC), and Incineration do not count as recoverable material streams.

Q. *Why is the MRpc87 Pilot Credit (use of third-party verified facilities) no longer available in the new v4.1 beta?*

- A. The MRpc87 Pilot Credit was originally introduced as an Innovation Credit. LEED v4.1 beta incorporated the use of third-party verified facilities in Path 2 and Path 4 for 1 and 2 points, respectively.

Q. *Why does MRpc87 still count in LEED v2009 (v3) and v4?*

- A. Project Registrations approved by USGBC under v2009 (v3) and v4 may still apply for the MRpc87 Pilot Credit point because the Innovation Credit has not been made ineligible for projects Registered under these LEED versions.

Q. *LEED v4 says my project “must meet the applicable diversion requirements” and some of those requirements include meeting a specific diversion rate. Does the MRpc87 Pilot Credit still apply?*

- A. Yes. While different project types may have different requirements, the MRpc87 Pilot Credit still applies to LEED v2009 (v3) and v4 projects regardless of the third-party verified facility's recovery rate. The MRpc87 Pilot Credit point was established as an Innovation Credit and using an RCI-Certified Facility meets the requirement for Innovation Credits in v2009 (v3) and v4. Key [requirements for recycling rates](#) stated in MRpc87 are:
- Measurements must be based on weight (not volume) using scales.
 - Recycling rates must be available on a website and viewable by the general public.

Q. *If my project takes multiple material types to an RCI-Certified Facility, can it still qualify for credit under v4.1 beta?*

- A. Yes. For v4.1 beta Path 2 and 4:
- Taking all your Mixed C&D to an RCI-Certified Facility verified to have at least a 50% recovery rate (w/o ADC) satisfies Path 2 for 1 point.
 - Taking all your Mixed C&D and one more material stream to an RCI Certified Facility that has been verified to have at least a 75% recovery rate (w/o ADC) satisfies Path 4 for 2 points. If the recovery rate for the Mixed C&D is less than 75%, it may be offset by a higher recovery rate of the separated material stream if the overall average recovery rate of the two material streams is at least 75%.
